Power Draw

Wednesday, November 6, 2024 12:39 PM

8 hrs of drive per day at 10% throttle

---

2 motors draw 1250w max

Power per day 2kw

$\frac{2000}{2500} = 0.8$ hr

$= 48$ min at max draw

∴ assuming we can run at 10% once at altitude

$48 \times 10 = 480$ min

$480/60 = 8$ hrs of flight per day
