Solar Input

Wednesday, November 6, 2024 11:59 AM

Average Daily Output = 2000.4 w
= 2kw

we need to see how much Solar power we are making

4 x 100 w 12v Solar pannel's

Simple total Power generation

Ontario average Sun hrs = 5.1 per day

max of each pannel
= (Sun hrs)(pannel wattage)
= (5.1)(100w) = 500.1 w

four pannels

(500.1)(4 pannels) = 2000.4 w

Average daily out put of solar system = 2.0004 kw
